Projects

Audio Flash Cards (<https://github.com/NotJoeMartinez/HackOKC-Audio-Flashcards>)

HACKATHON

- Breaks down long audio files into a combination of individual soundbites based on off of keywords that the user feeds it.
- Built on the flask web-framework and the google speech to text API

Phonic (<https://devpost.com/software/phonic>)

HACKATHON

- Convert audio files into key metrics and condensed summaries, allowing the user to look back and view discussion topics, important keywords, positive/negative sentiments, disagreement scores, and speakers and how long they spoke.
- Created with Flask and Googles speech to text API

MemeStealer9000 (<https://github.com/NotJoeMartinez/MemeStealer9000>)

PERSONAL

- Steals posts from trending subreddits and re-posts them on Instagram and other platforms.
- Developed using Reddits python API(Praw) and Twitters python API (Tweepy)
- Deployed using an Ubuntu Linux AWS EC2 instance
